VEHICLE INTERIOR REARVIEW MIRROR ASSEMBLY WITH DISPLAY

ABSTRACT

A vehicle rearview mirror system for a vehicle includes a rearview mirror case, which is adapted to mount to a vehicle, and a reflective element. The mirror system further includes a carrier, which has at least either a display screen or a user-actuatable interface device, such as a user-actuatable button. The carrier is mechanically connected to the mirror case, for example by a snap-fit connection, whereby the mirror system is easier to assemble and optionally provides for a removable carrier for replacement, repair or upgrade.
